EDUCATION

Khon Kaen University - College of Computing

May 2023 - Present

Bachelor of Science in Computer Science | Fourth-year undergraduate student

- **Relevant Coursework:** Web Programming & Application Development, Database Systems & Design, Software Engineering, System Analysis & Design, Cloud Computing & DevOps, Data Structures & Algorithms.
- **Career Focus:** Full Stack Developer (Modern Frontend | Backend Architecture | RESTful APIs & Cloud Deployment)

INTERNSHIP EXPERIENCE

The Business SEO Company Limited

May 2026 - Jun 2026

Full-Stack Web Developer Intern

- **Client-Centric Web Solutions:** Developed and maintained responsive web applications and dynamic websites across diverse industries, translating custom client business requirements into functional, scalable digital solutions.
- **Full-Stack Implementation:** Engineered end-to-end features using modern frontend technologies and backend services, ensuring high performance, cross-browser responsiveness, and seamless user experiences.
- **CMS & WordPress Customization:** Built tailored WordPress solutions by developing custom themes, integrating plugins, and connecting REST APIs to deliver user-friendly content management systems for clients while optimizing site loading speed and SEO.
- **Agile Delivery & Deployment:** Collaborated closely with project managers and design teams to deliver multiple client projects on schedule, assisting with database configuration, debugging, and production deployments.

PROJECT EXPERIENCE

Project 1: Smart Moto Service Center

Nov 2025 - Mar 2026

Role: Full-Stack Developer | **Stack:** React (Vite, TypeScript), NestJS, PostgreSQL, Prisma ORM, Docker, Tailwind CSS, Recharts

- **Comprehensive Service Management:** Designed and built an end-to-end motorcycle service-center web application to streamline vehicle intake, repair tracking, parts inventory, billing, and personnel workflows.
- **Frontend & State Architecture:** Developed an intuitive, responsive dashboard using React, TypeScript, and Tailwind CSS; implemented Context API and custom hooks for real-time service tracking and repair status workflows.
- **Robust Backend & Security:** Engineered a modular RESTful backend with NestJS and Prisma ORM on PostgreSQL; implemented Role-Based Access Control (RBAC) and JWT authentication to protect multi-role resources.
- **Analytics & Containerization:** Integrated Recharts for operational and revenue data visualization, documented APIs with Swagger, and containerized the system with Docker to ensure consistent development and deployment.

Project 2: AI-Powered Product Recommendation Engine

Mar 2026 - Jun 2026

Role: Full-Stack Developer | **Stack:** Next.js 14, FastAPI, PostgreSQL (pgvector), Redis, Sentence Transformers, Claude API, Docker

- **Hybrid Recommendation Engine:** Architected a hybrid recommendation system combining ALS collaborative filtering (automated scheduled retraining tracked via MLflow) and semantic content-based filtering.
- **Semantic Search & Vector Storage:** Generated high-dimensional embeddings using Sentence Transformers, stored in PostgreSQL with pgvector for cosine similarity matching; integrated Claude API to parse natural-language search queries into structured filters.
- **Performance & Full-Stack Interface:** Developed a modern, responsive UI using Next.js 14 App Router and Tailwind CSS; integrated Redis caching for frequently accessed recommendation results to minimize API latency.

Project 3: Enterprise E-commerce Platform & RESTful API

Jun 2025 - Oct 2025

Role: Backend Developer | **Stack:** Java 21, Spring Boot 3.3, Spring Security, PostgreSQL 15, WebSocket (STOMP), Next.js 14, Docker

- **Multi-Tier Role Management:** Built a scalable RESTful API with Spring Boot 3.3 and Java 21 supporting Customers, Sellers, and Admin roles, secured via Spring Security and JWT-based RBAC.
- **Real-Time Communication & Payment:** Implemented real-time messaging and notifications between buyers and sellers using WebSocket (STOMP); integrated the Omise payment gateway (Credit/Debit, PromptPay) with secure payment webhooks.
- **Commerce Lifecycle:** Engineered core business logic for complex product variants, stock control, shopping carts, order tracking, and sales analytics dashboards containerized using Docker.

Project 4: Food Order App (Admin & Customer)

Nov 2024 - Mar 2025

Role: Mobile Developer | **Stack:** Flutter, Dart, Firebase (Auth, Realtime DB, FCM, Storage), Kotlin, State Management (Provider/Bloc)

- **Cross-Platform Architecture:** Built a full-featured cross-platform food ordering application with distinct customer and administrator workflows, utilizing Firebase Authentication for secure multi-role access control.
- **Real-Time Tracking & Alerts:** Implemented live order-status tracking synchronized across devices via Firebase Realtime Database, integrated with Firebase Cloud Messaging (FCM) for instant push notifications on delivery updates.
- **Menu Management & Native Performance:** Developed administrative interfaces for catalog management and order fulfillment, leveraging Kotlin to optimize native Android performance and platform-specific capabilities.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js (App Router), TypeScript, JavaScript, Vite, Tailwind CSS, HTML5, CSS3, Context API, Zustand, Recharts
- **Backend & APIs:** Node.js, NestJS, Express.js, Java (Spring Boot), Python (FastAPI), RESTful APIs, Swagger/OpenAPI, WebSocket (STOMP)
- **Databases & ORM:** PostgreSQL, pgvector, MySQL, Prisma ORM, Spring Data JPA, Redis, Firebase, Supabase
- **DevOps & Tools:** Docker, Git, GitHub, Postman, Vercel, Railway, Linux, CI/CD (GitHub Actions)
- **CMS & Others:** WordPress (Custom Themes, Plugins & REST API), Role-Based Access Control (RBAC), JWT Authentication
- **AI-Assisted Development:** Cursor, Claude Code, GitHub Copilot, Codex
